Printed in the United States of America.

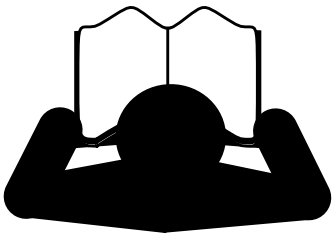
These are common practices that may or may not be applicable to the products described in this manual.

Safety at All Times

Thoroughly read and understand the instructions given in this manual before operation. Refer to the "Safety Label" section, read all instructions noted on them.

Do not allow anyone to operate this equipment who has not fully read and comprehended this manual and who has not been properly trained in the safe operation of the equipment.

- ▲ Operator should be familiar with all functions of the unit.
- ▲ Operate implement from the driver's seat only.
- ▲ Make sure all guards and shields are in place and secured before operating implement.
- ▲ Do not leave tractor or implement unattended with engine running.
- ▲ Dismounting from a moving tractor could cause serious injury or death.
- ▲ Do not stand between tractor and implement during hitching.
- ▲ Keep hands, feet, and clothing away from power-driven parts.
- ▲ Wear snug fitting clothing to avoid entanglement with moving parts.
- ▲ Watch out for wires, trees, etc., when raising implement. Make sure all persons are clear of working area.
- ▲ Turning tractor too tight may cause implement to ride up on wheels. This could result in injury or equipment damage.



Look For The Safety Alert Symbol

The SAFETY ALERT SYMBOL indicates there is a potential hazard to personal safety involved and extra safety precaution must be taken. When you see this symbol, be alert and carefully read the message that follows it. In addition to design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment.

Be Aware of Signal Words

A Signal word designates a degree or level of hazard seriousness. The signal words are:

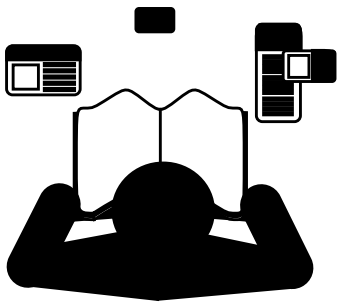
⚠ DANGER
Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This signal word is limited to the most extreme situations, typically for machine components that, for functional purposes, cannot be guarded.

⚠ WARNING
Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury, and includes hazards that are exposed when guards are removed. It may also be used to alert against unsafe practices.

⚠ CAUTION
Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

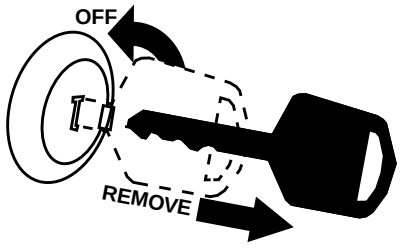
For Your Protection

- ▲ Thoroughly read and understand the "Safety Label" section, read all instructions noted on them.



Shutdown and Storage

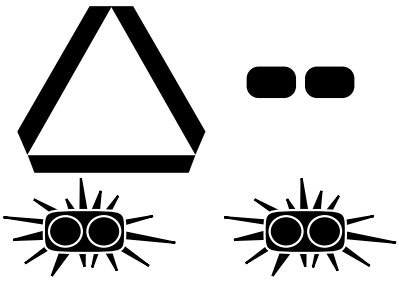
- ▲ Lower machine to ground, put tractor in park, turn off engine, and remove the key.
- ▲ Detach and store implements in a area where children normally do not play. Secure implement by using blocks and supports.



These are common practices that may or may not be applicable to the products described in this manual.

Use Safety Lights and Devices

- ▲ Slow moving tractors, self-propelled equipment, and towed implements can create a hazard when driven on public roads. They are difficult to see, especially at night.
- ▲ Flashing warning lights and turn signals are recommended whenever driving on public roads. Use lights and devices provided with implement.

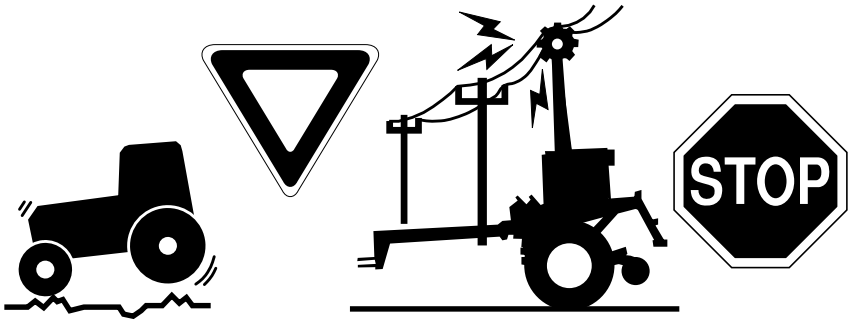


Transport Machinery Safely

- ▲ Comply with state and local laws.
- ▲ Maximum transport speed for implement is 20 mph. DO NOT EXCEED. Never travel at a speed which does not allow adequate control of steering and stopping. Some rough terrain require a slower speed.
- ▲ Sudden braking can cause a towed load to swerve and upset. Reduce speed if towed load is not equipped with brakes.
- ▲ Use the following maximum speed - tow load weight ratios as a guideline:

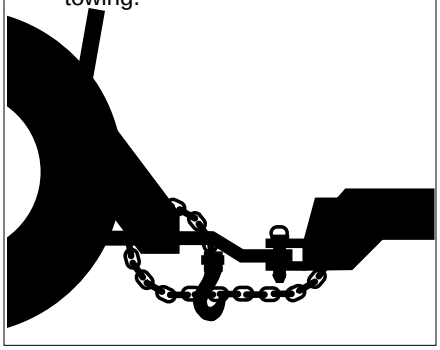
  20 mph when weight is less than or equal to the weight of tractor.

  10 mph when weight is double the weight of tractor.
- ▲ **IMPORTANT:** Do not tow a load that is more than double the weight of tractor.



Use A Safety Chain

- ▲ A safety chain will help control drawn machinery should it separate from the tractor drawbar.
- ▲ Use a chain with the strength rating equal to or greater than the gross weight of the towed machinery.
- ▲ Attach the chain to the tractor drawbar support or other specified anchor location. Allow only enough slack in the chain to permit turning.
- ▲ Do not use safety chain for towing.



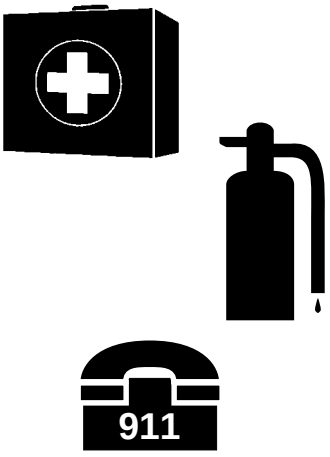
Practice Safe Maintenance

- ▲ Understand procedure before doing work. Use proper tools and equipment, refer to Operator's Manual for additional information.
- ▲ Work in a clean dry area.
- ▲ Lower the implement to the ground, put tractor in park, turn off engine, and remove key before performing maintenance.
- ▲ Allow implement to cool completely.
- ▲ Do not grease or oil implement while it is in operation.
- ▲ Inspect all parts. Make sure parts are in good condition & installed properly.
- ▲ Remove buildup of grease, oil or debris.
- ▲ Remove all tools and unused parts from implement before operation.

These are common practices that may or may not be applicable to the products described in this manual.

Prepare for Emergencies

- ▲ Be prepared if a fire starts.
- ▲ Keep a first aid kit and fire extinguisher handy.
- ▲ Keep emergency numbers for doctor, ambulance, hospital and fire department near phone.



Wear Protective Equipment

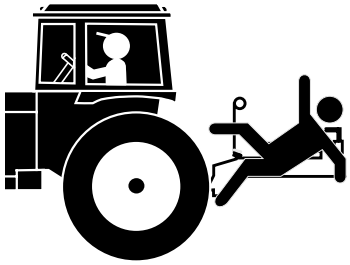
- ▲ Protective clothing and equipment should be worn.
- ▲ Wear clothing and equipment appropriate for the job. Avoid loose fitting clothing.
- ▲ Prolonged exposure to loud noise can cause hearing impairment or hearing loss. Wear suitable hearing protection such as earmuffs or earplugs.
- ▲ Operating equipment safely requires the full attention of the operator. Avoid wearing radio headphones while operating machinery.

Avoid High Pressure Fluids Hazard

- ▲ Escaping fluid under pressure can penetrate the skin causing serious injury.
- ▲ Avoid the hazard by relieving pressure before disconnecting hydraulic lines or performing work on the system.
- ▲ Make sure all hydraulic fluid connections are tight and all hydraulic hoses and lines are in good condition before applying pressure to the system.
- ▲ Use a piece of paper or cardboard, NOT BODY PARTS, to check for suspected leaks.
- ▲ Wear protective gloves and safety glasses or goggles when working with hydraulic systems.
- ▲ If an accident occurs, see a doctor immediately. Any fluid injected into the skin must be treated within a few hours or gangrene may result.

Keep Riders Off Machinery

- ▲ Riders obstruct the operator's view, they could be struck by foreign objects or thrown from the machine.
- ▲ Never allow children to operate equipment.



Handle Chemicals Properly

- ▲ Protective clothing should be worn.
- ▲ Handle all chemicals with care.
- ▲ Follow instructions on container label.
- ▲ Agricultural chemicals can be dangerous. Improper use can seriously injure persons, animals, plants, soil, and property.
- ▲ Inhaling smoke from any type of chemical fire is a serious health hazard.
- ▲ Store or dispose of unused chemicals as specified by the chemical manufacturer.

Safety Labels

Your Seeder comes equipped with all safety labels in place. They were designed to help you safely operate your Seeder.

1. *Read and follow label directions.*
2. *Keep all safety labels clean and legible.*
3. *Replace all damaged or missing labels.*
4. *Some new equipment installed during repair require safety labels to be affixed to the replaced component as specified by Land Pride. When ordering new components make sure the correct safety labels are included in the request. To order new labels go to your Land Pride dealer.*
5. *Refer to this section for proper label placement. Install new decals as follows*
   a. *Clean the area on which the decal is to be placed.*
   b. *Spray soapy water on the surface where the decal is to be placed.*
   c. *Peel backing from decal. Press firmly on surface, being careful not to cause air bubbles under decal.*
   d. *Squeeze out air bubbles with the edge of a credit card.*

Land Pride welcomes you to the growing family of new product owners.

This Seeder has been designed with care and built by skilled workers using quality materials. Proper assembly, maintenance, and safe operating practices will help you get years of satisfactory use from the machine.

Application

The PS2096 Primary Seeder is perfect for wide open landscape seeding and turf farms. The main seedbox can be equipped with our standard fluted seed cups and agitation to seed most turf type grasses, as well as a variety of other seeds from peas to alfalfa. It is possible to seed two different types of seed at different rates by utilizing the optional Small Seeds Box. The Small Seeds Box uses a smaller version of our fluted seed cup for seeds such as alfalfa, clover and many other types of small seeds. See **“Section 7: Features & Benefits”** on page 28 for additional information.

Using This Manual

- This Operator’s Manual is designed to help familiarize you with safety, assembly, operation, adjustments, troubleshooting, and maintenance. Read this manual and follow the recommendations to help ensure safe and efficient operation.
- The information contained within this manual was current at the time of printing. Some parts may change slightly to assure you of the best performance.
- To order a new Operator’s or Parts Manual contact your authorized dealer. Manuals can also be downloaded, free-of-charge from our website at www.landpride.com or printed from the Land Pride Service & Support Center by your dealer.

Terminology

“Right” or “Left” as used in this manual is determined by facing the direction the machine will operate while in use unless otherwise stated.

Definitions

NOTE: A special point of information that the operator must be aware of before continuing.

IMPORTANT: A special point of information related to its preceding topic. Land Pride’s intention is that this information should be read and noted before continuing.

Owner Assistance

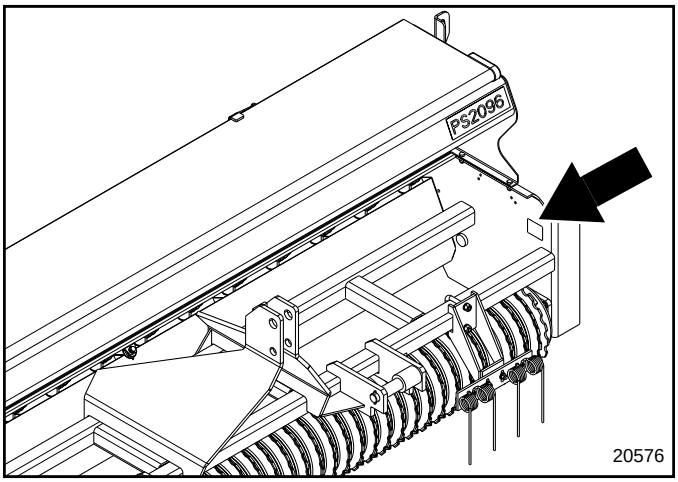
The Warranty Registration card should be filled out by the dealer at the time of purchase. This information is necessary to provide you with quality customer service.

If customer service or repair parts are required contact a Land Pride dealer. A dealer has trained personnel, repair parts and equipment needed to service the Seeder.

The parts on your PS2096 Seeder have been specially designed and should only be replaced with genuine Land Pride parts. Therefore, should your Seeder require replacement parts go to your Land Pride Dealer.

Serial Number Plate

For prompt service always use the serial number and model number when ordering parts from your Land Pride dealer. Be sure to include your serial and model numbers in correspondence also. Refer to Figure 1 for the location of your serial number plate.



Serial Number Plate Location
Figure 1

Further Assistance

Your dealer wants you to be satisfied with your new Seeder. If for any reason you do not understand any part of this manual or are not satisfied with the service received, the following actions are suggested:

1. Discuss the matter with your dealership service manager making sure he is aware of any problems you may have and that he has had the opportunity to assist you.
2. If you are still not satisfied, seek out the owner or general manager of the dealership, explain the problem and request assistance.
3. For further assistance write to:

Land Pride
Service Department
P.O. Box 5060
Salina, KS 67402-5060

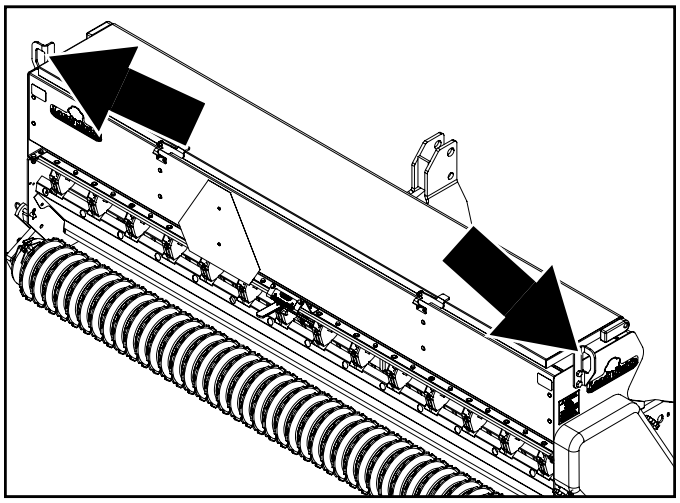
Pre-Assembly Checklist

	Check	Reference
☐	All major frame components	Operator's Manual
☐	Fasteners and pins that were shipped with the seeder. **NOTE:** All hardware from the factory has been installed in the location where it will be used. If a part or fastener is temporarily removed for assembly reasons, remember where it goes.Keep the parts separated.	Operator's Manual
☐	All working parts are moving freely, bolts are tight and cotter pins are spread.	Operator's Manual
☐	If a pin, bolt or other part has been removed, and you are unsure where it is used, refer to the parts manual. Be sure the part gets used in the correct location. By double checking while you assemble, you will lessen the chance of using a bolt incorrectly that may be needed later.	Operator's Manual
☐	All grease fittings are in place and lubricated.	Section 4 Page 25
☐	Proper tension and alignment on all drive chains.	Operator's Manual
☐	Safety decals are correctly located and legible. Replace if damaged.	Important Safety Information

Sling Bracket

Refer to Figure 1-1

The sling brackets allow points at each end to hook the chain for lifting of the unit. When hooking the chain to the sling brackets, be certain to either use a spreader bar on the chain or use a long chain to prevent bending the sling brackets.



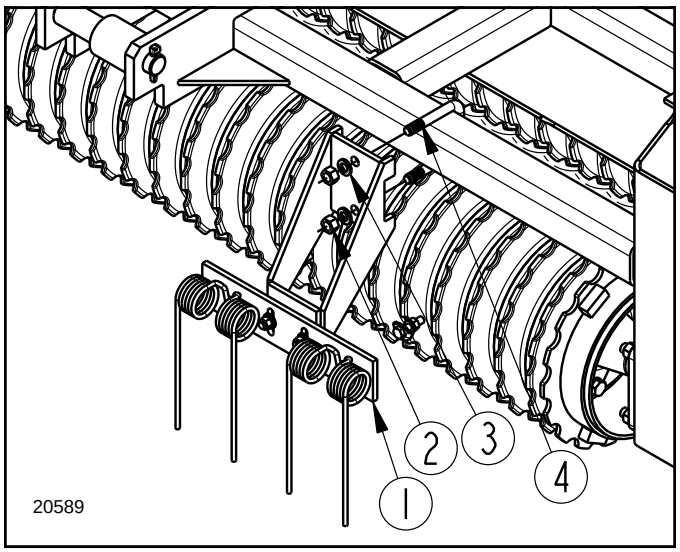
Sling Bracket
Figure 1-1

Tire Track Remover Assembly

For shipping purposes the Tire Track Removers are assembled 180 degrees from their operating position.

Refer to Figure 1-2

1. Remove Track Remover (#1).
2. Flip Track Remover over 180 degrees and reassemble as shown with 1/2" u-bolt (#4), lockwasher (#3) and nut (#2).



Tire Track Remover
Figure 1-2

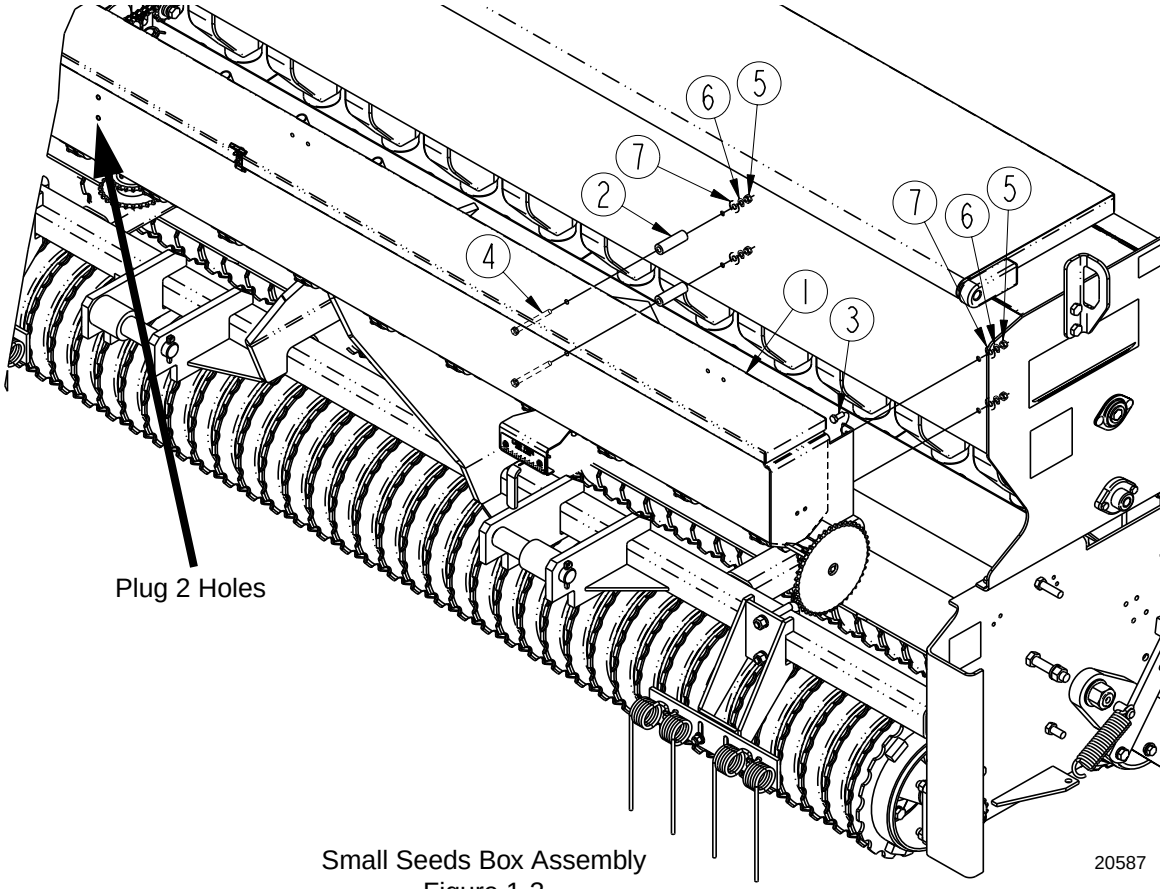
Small Seeds Box (S/N 397503+)

Small Seeder Box assembly

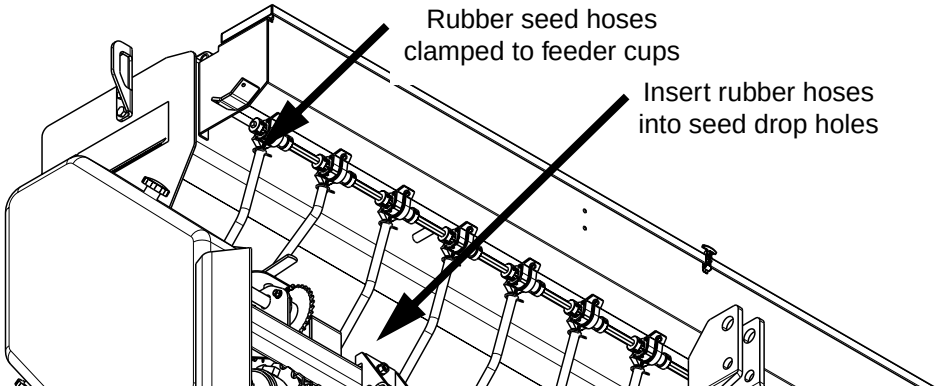
1. Remove the eight bolts, lock washers and nuts that are assembled in the front of the main box. Retain two bolts, lock washers and nuts and use these to plug the two holes in the front of the Small Seeds Box.

Refer to Figure 1-6:

2. Assemble the Small Seeds Box (#1) at the ends with the four 5/16” bolts (#3), flat washers (#7), lock washers (#6) and nuts (#5). Do not tighten until spacers (step 3) are installed.
3. Align the four box spacers (#2) to the inner holes of the Small Seeds Box and the main box and assemble the four longer 5/16” bolts (#4), flat washers (#7), lock washers (#6) and nuts (#5).
4. Refer to Figure 1-4. Attach rubber seed tubes to feeder cups with clamps provided and then into the small holes in seed drop without clamps. Push rubber hoses into the seed drop hole to remove any excess slack.



Small Seeds Box Assembly
Figure 1-3

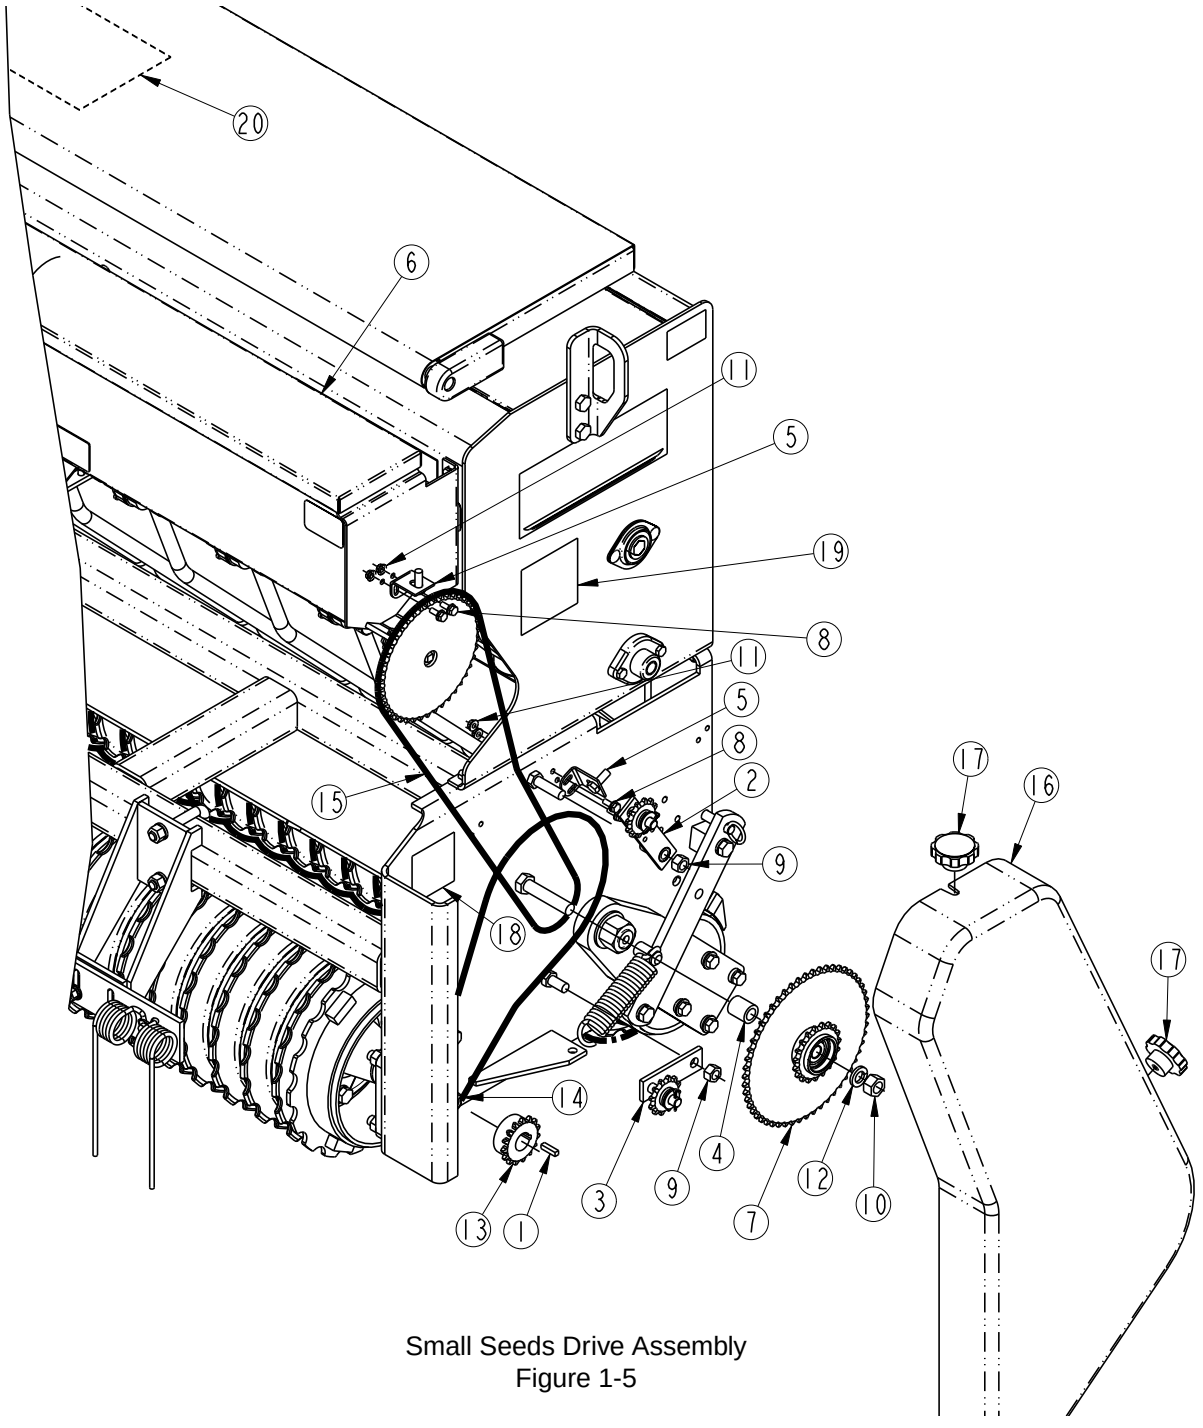


Small Seeds Tube Assembly
Figure 1-4

Small Seeds Drive Assembly

Refer to Figure 1-8:

1. Place decal **"Danger Guard Missing**" (#18), **"Danger Moving Parts**" (#19) and **"Seed Rate Chart"** (#20) in locations shown.
2. Assemble chain guard mounts (#5) with the 1/4" flange bolts (#8) and flange nuts (#11). Do not tighten until the complete drive has been assembled and the chain guard (#16) installs properly. The chain guard mounts are slotted for easier chain guard mounting.
3. Install chain idler with welded on spacer (#2) and chain idler (#3) with 1/2" nut (#9).
4. Assemble the spacer (#4) and speed change sprocket assembly (#7) to the 5/8" welded on bolt with the 5/8" lock washer (#12) and nut (#10).
5. Assemble the front roller sprocket (#13) and key (#1) to the front roller shaft.
6. Install chain (#14) first and then chain (#15). Tighten chains with idlers (#2) and (#3).
7. Assemble chain guard (#16). Position chain guard mounts (#5) where needed and tighten hardware.



Small Seeds Drive Assembly
Figure 1-5

Small Seeds Box (S/N 397502-)

Small Seeds Box Assembly

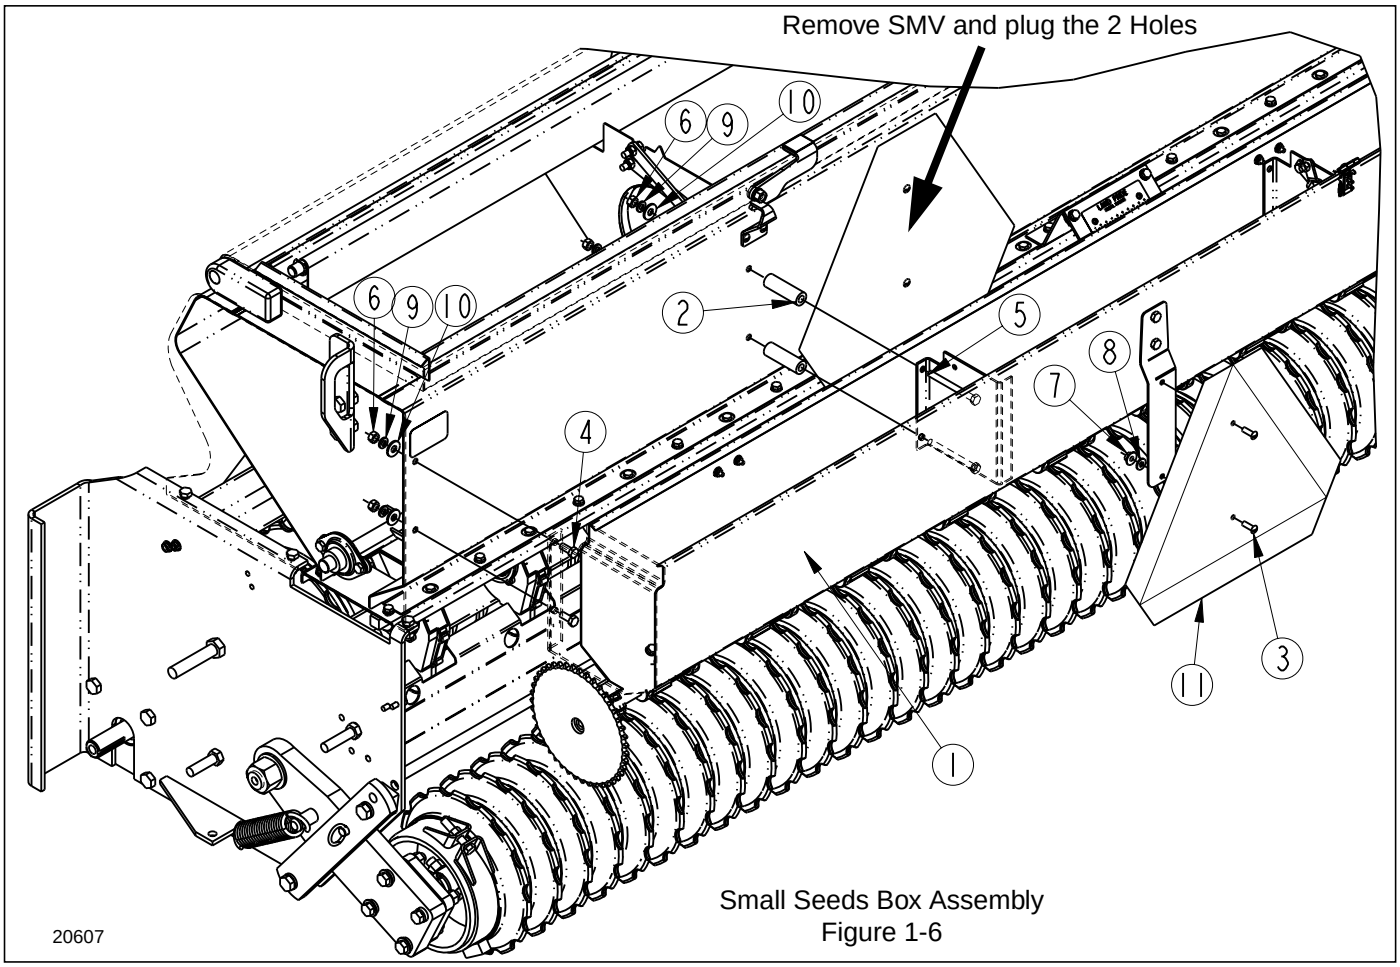
1. Remove the eight bolts, lockwashers and nuts that are assembled in the back of the main box. Retain two bolts, lockwashers and nuts and use these to plug the two holes in the back of the main box where the SMV sign will be removed.

Refer to Figure 1-6:

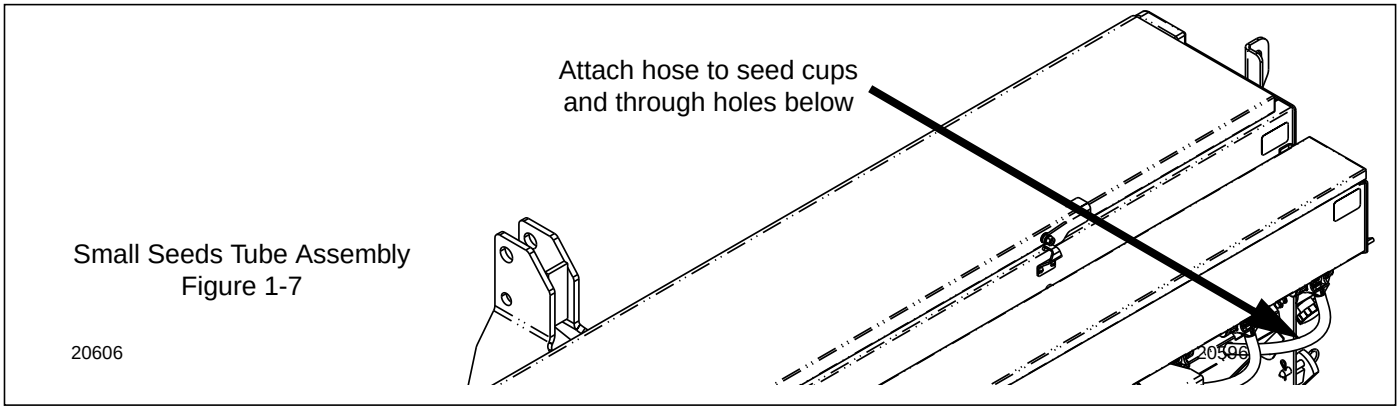
1. Remove the SMV (#11) and SMV mounting bracket from the main box.
2. Assemble the Small Seeds Box (#1) at the ends with the four 5/16” bolts (#4), flatwashers (#10), lockwashers (#9) and nuts (#6).
3. Align the four box spacers (#2) to the inner holes of the small seeds box and the main box and assemble the four longer 5/16” bolts (#5), flatwashers (#10), lockwashers (#9) and nuts (#6).
4. Install SMV (#11) with SMV mounting bracket to Standard Seed Box Assembly (#1).

Refer to Figure 1-7

5. Attach the rubber seed tubes to the seed cups and then through the small seed holes below.



Small Seeds Box Assembly
Figure 1-6

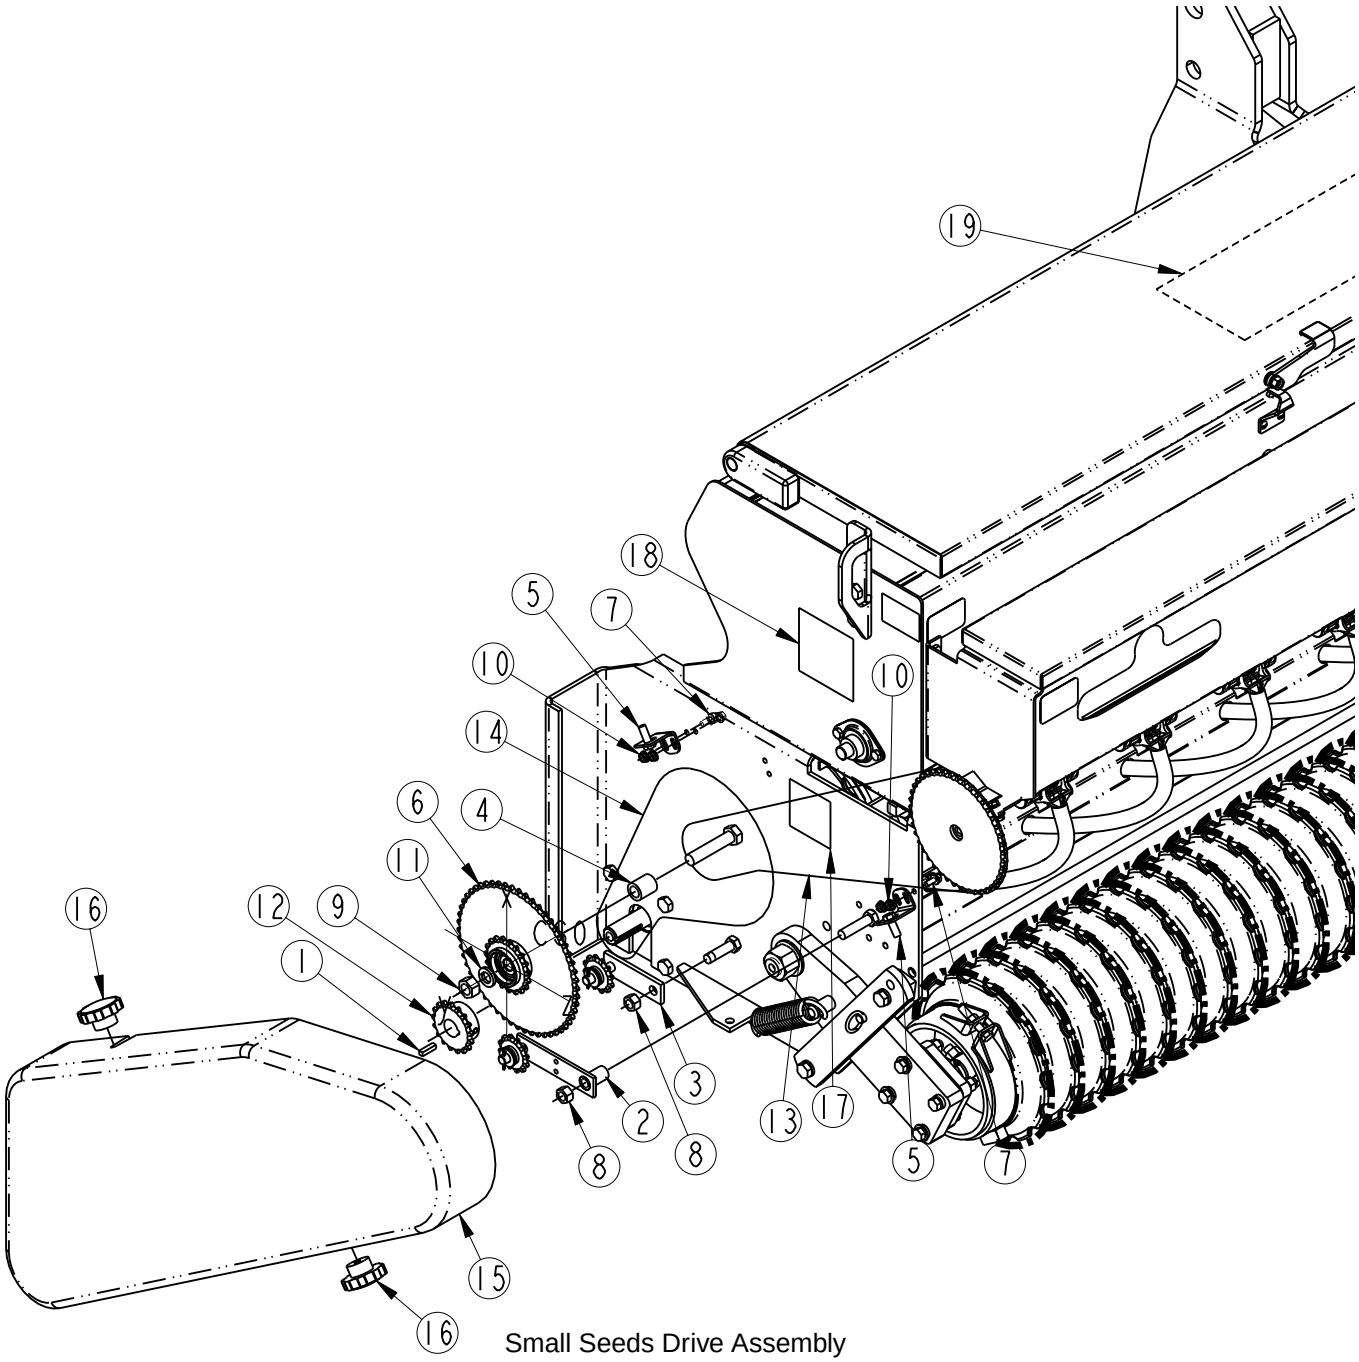


Small Seeds Tube Assembly
Figure 1-7

Small Seeds Drive Assembly

Refer to Figure 1-8:

1. Place decal **"Danger Guard Missing**" (#17), **"Danger Moving Parts**" (#18) and **"Seed Rate Chart"** (#19) in locations shown (beneath lid).
2. Assemble chain guard mounts (#5) with the 1/4" flange bolts (#7) and flange nuts (#10). Do not tighten until the complete drive has been assembled and the chain guard (#15) installs properly. The chain guard mounts are slotted for easier chain guard mounting.
3. Install chain idler with welded on spacer (#2) and chain idler (#3) with 1/2" nut (#8).
4. Assemble the spacer (#4) and reduction sprocket assembly (#6) to the 5/8" welded on bolt with the 5/8" lockwasher (#11) and nut (#9).
5. Assemble the front roller sprocket (#12) and key (#1) to the front roller shaft.
6. Install chain (#14) first and then chain (#13).
7. Assemble chain guard (#15) with knobs (#16). Position chain guard mounts (#5) where needed and tighten hardware.



Small Seeds Drive Assembly
Figure 1-8

20608

Pull Tongue Hook-Up

Refer to Figure 1-9:

The lower link handles should be in the down position before preceding.

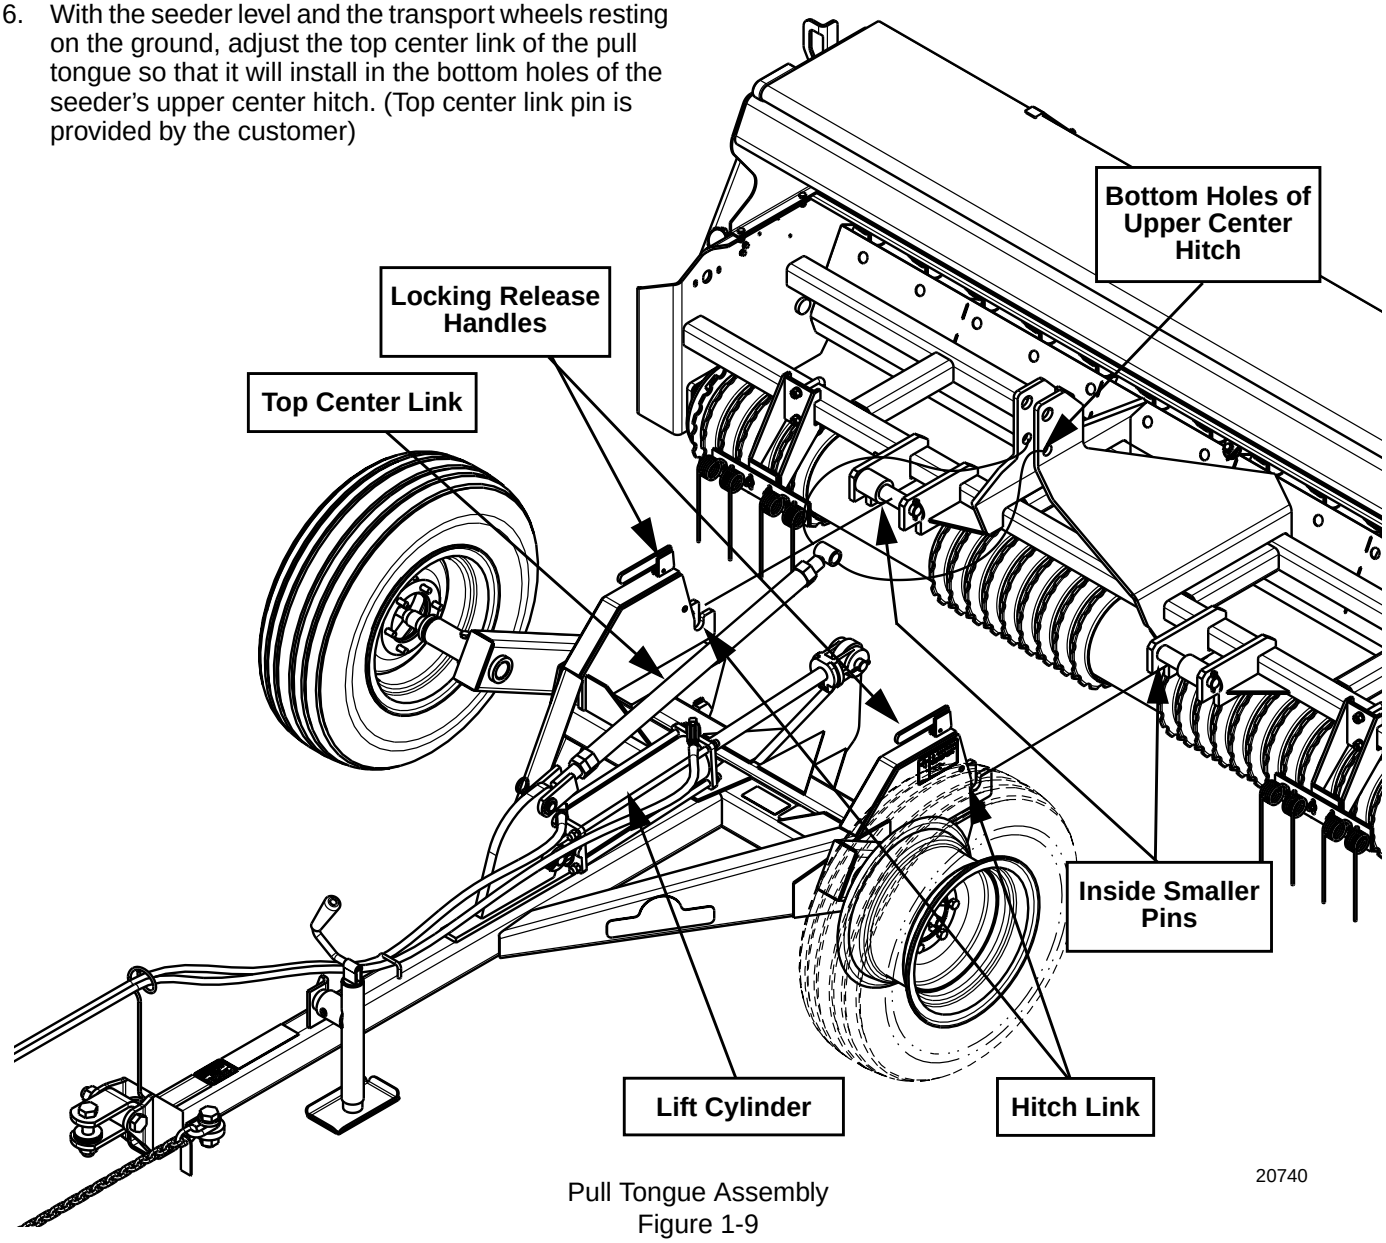
1. Mount Pull Tongue to tractor drawbar and secure with safety chain.
2. Connect hydraulic hoses to tractor.
3. Fully extend the lift cylinder to rase the transport wheels and lower the hitch links.
4. Back the pull tongue up to the seeder to align the hitch links with the seeder's inside smaller pins.
5. Retract the lift cylinder to rase the hitch links up around the seeder's inside smaller pins until the pins lock into the lower hitch links. Once the pins are locked in, adjust the lift cylinder up or down as needed to level the seeder.
6. With the seeder level and the transport wheels resting on the ground, adjust the top center link of the pull tongue so that it will install in the bottom holes of the seeder's upper center hitch. (Top center link pin is provided by the customer)

Pull Tongue Disconnect

CAUTION

The seeder will have negative tongue weight when it is lifted off the ground. Lower the seeder to the ground before proceeding with Pull Tongue disconnect. (Negative tongue weight is when most of the weight is to the rear of the implement causing the front of the tongue to be light and may rise up when disconnected.)

1. Remove top link pin.
2. Flip locking release handles up on pull tongue.
3. Lower tongue until the links are free from the seeders lower pins.



Pull Tongue Assembly
Figure 1-9

General Description

The following information is a brief description of how this Primary Seeder works. It is included to help you understand the operation of this seeder.

The power to drive the seeding function of this seeder comes from the ground speed of the tractor. The seed metering is powered by the front roller at a rate proportional to the distance driven. This ensures that the rate applied in pounds per acre or pounds per 1000 square feet remains constant as ground speed is varied. The power is transmitted via drive chains to the seed cups. This drive can be adjusted to a high or low range to broadcast more or less seed. The seed rate is adjustable using the seed rate lever located at the rear of the seeder. The seed is dropped between cast iron rollers. The front roller crushes clods, presses down small stones and forms a firm seedbed. The rear roller firms the soil around the seeds.

Operating Check List

In addition to design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence and proper training involved in its operation, transport, maintenance and storage of equipment. Before beginning to operate your Primary Seeder, the following inspection should be performed.

	Check	Reference
☐	Read and follow the "**Safety Rules**" carefully.	Important Safety Information
☐	Read all of the "**Tractor Hook Up**" and preparation instructions.	Section 2 page 14
☐	**"Basic Operations"** in this Manual	Operator's Manual
☐	Lubricate the seeder as needed. Refer to "**Lubrication**"	Section 4 page 25
☐	Check the seeder initially and periodically for loose bolts & pins, "**Torque Values Chart**".	Section 8 page 30
☐	Make sure all guards and shields are in place.	Operator's Manual
☐	Check initially and periodically for loose bolts, pins, and chains.	Operator's Manual
☐	Inspect the seed cups and seed tubes for foreign matter.	Section 4 page 29
☐	Set speed change sprocket for drive type desired.	Section 3 page 17
☐	Set seed rate. See "**Seed Rate Charts**".	Section 3 page 20

Seeder Preparation

Before proceeding with the first time set-up, or before making any adjustments mentioned in this section, make every effort to attach the seeder to a tractor.

1. This seeder can be transported with a full box of seeds. It is best not to do this unless necessary because the increased weight does increase the chances for problems on the road. Do not exceed 20 miles per hour.
2. Calibrate your seeder for a proper rate based on the seed you are using. Calibration information is located on the inside of your box lid or on page 17.
3. Make sure the seed cup door adjustment handle on each cup is set the same across the seeder.
4. Never allow anyone to ride on the seeder.
5. Maximum seeding speed will vary according to soil conditions.
6. Check that all plugs and caps have been replaced properly.
7. Be sure all bolts and nuts are tight.
8. Be certain all guards are in place and secure.
9. Clear the area to be seeded of rocks, branches and other foreign objects.
10. At first begin seeding at a slow forward speed and shift up until the desired speed is achieved.

Tractor Requirements

This Primary Seeder is designed for tractors in the Category 2 or 3 and Cat. 2 Quick Hitch. An optional pull package is available for smaller tractors.

Check the tractor's 3-point lifting capacity. Refer to **"Section 6: Specifications and Capacities"** on Page 27 for seeder weight.

> **NOTE:** In order to maintain steering control, ballast may have to be added to your tractor. To determine whether or not to add ballast, refer to your tractor operator's manual.

Tractor 3-Point Hook-Up

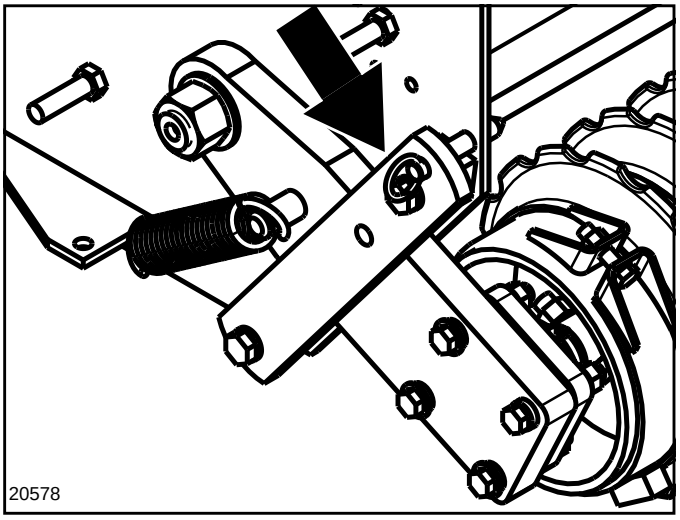
1. Back tractor up to seeder until 3-Point links are aligned with hitch clevises on seeder.
2. Secure the tractor's 3-Point lower arms to the lower hitch clevises using hitch pins supplied.
3. Secure tractor's top center link to the seeder top hitch using a 1" diameter hitch pin.
4. With the seeder resting on level ground, adjust the tractor's top link until the seeder is level.
5. Remove rear roller lock pin from parking position and place in storage position. See Figure 2-1 on page 15.

Pull Tongue Hook-Up

1. See "**Pull Tongue Hook-Up**" on page 13 for a complete description of connecting a tractor to the pull tongue and seeder.

IMPORTANT: Always operate the seeder with the transport wheels on the ground and the seeder level to prevent dirt build-up and damage to the seeder.

2. At the field site, lower the seeder to the ground by raising the transport wheels until the seeder is resting on the ground. Transport wheels must also be resting on the ground to support some of the seeder's weight.
3. Set the tractor's hydraulic lever to return the lift cylinder to this position each time the seeder is raised and lowered.
4. With the seeder and transport wheels resting on level ground, readjust the pull tongue top center link to level the seeder if needed.
5. Remove rear roller lock pin from parking position and place in storage position. Refer to Figure 2-1



Rear Roller Pin in Storage Position
Figure 2-1

CAUTION

Never back up with the seeder down. This will loosen the drive chain and possibly damage the seeder.

Seeding

Slowly lower the Primary Seeder to the ground with the tractor's hydraulics. Begin in a low gear as the full seeder can be a heavy load. Ground speed is determined based on safety, ground conditions and terrain. In most cases do not exceed 6 MPH. The seeding mechanism is ground driven. Therefore, seeding can be discontinued by raising the seeder off the ground with the 3-point lever before making a turnaround and when transporting from one area to another.

Transporting

CAUTION

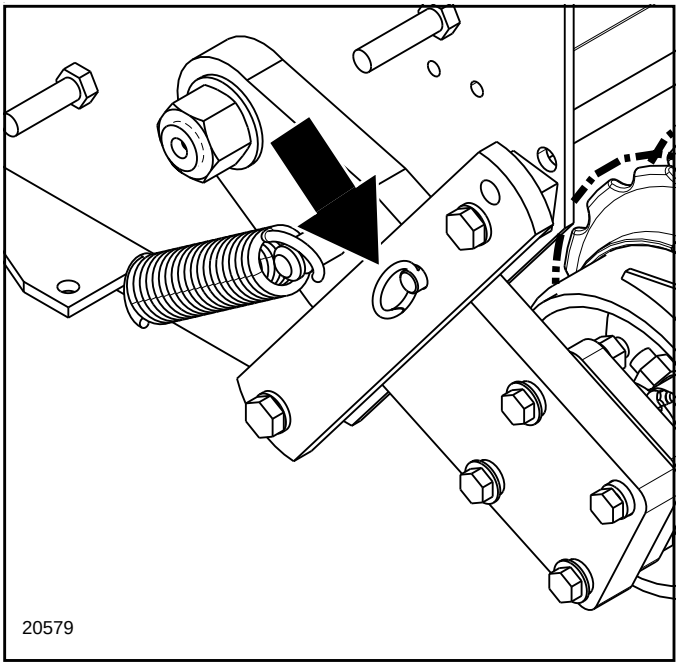
When traveling on public roads whether at night or during the day, use accessory light and devices for adequate warning to operators of other vehicles. Comply with all federal, state and local laws.

1. Select a safe ground travel speed when transporting from one area to another. When traveling on roadways, transport in such a way that faster moving vehicles may pass you safely.
2. Reduce tractor ground speed when turning. Leave enough clearance so the seeder does not contact obstacles such as buildings, trees or fences.
3. When traveling over rough or hilly terrain, shift tractor to a lower gear.

Parking

The following steps should be done when preparing to store the seeder or unhitch it from the tractor. See also **"Section 5: Maintenance & Lubrication"** on Page 25 for additional information on long term storage of your seeder.

1. Park the seeder on a level, solid area.
2. Shut off tractor engine and engage parking brake.
3. To prevent the seeder from tipping backward, remove rear roller lock pin from storage position and place in parking position. Refer to Figure 2-2
4. Unhitch from tractor.



Rear Roller Pin in Parking Position
Figure 2-2

Drive System

Your Primary Seeder uses standard no. 40 roller chain throughout its drive system. The drive system is simple and designed for low maintenance.

1. Check the drive idler arms to insure that they are taking up any excess chain slack.
2. Check each chain to insure that it is not over-tightened.
3. Annually clean and lubricate chain with chain oil.

Roller Packing Wheels

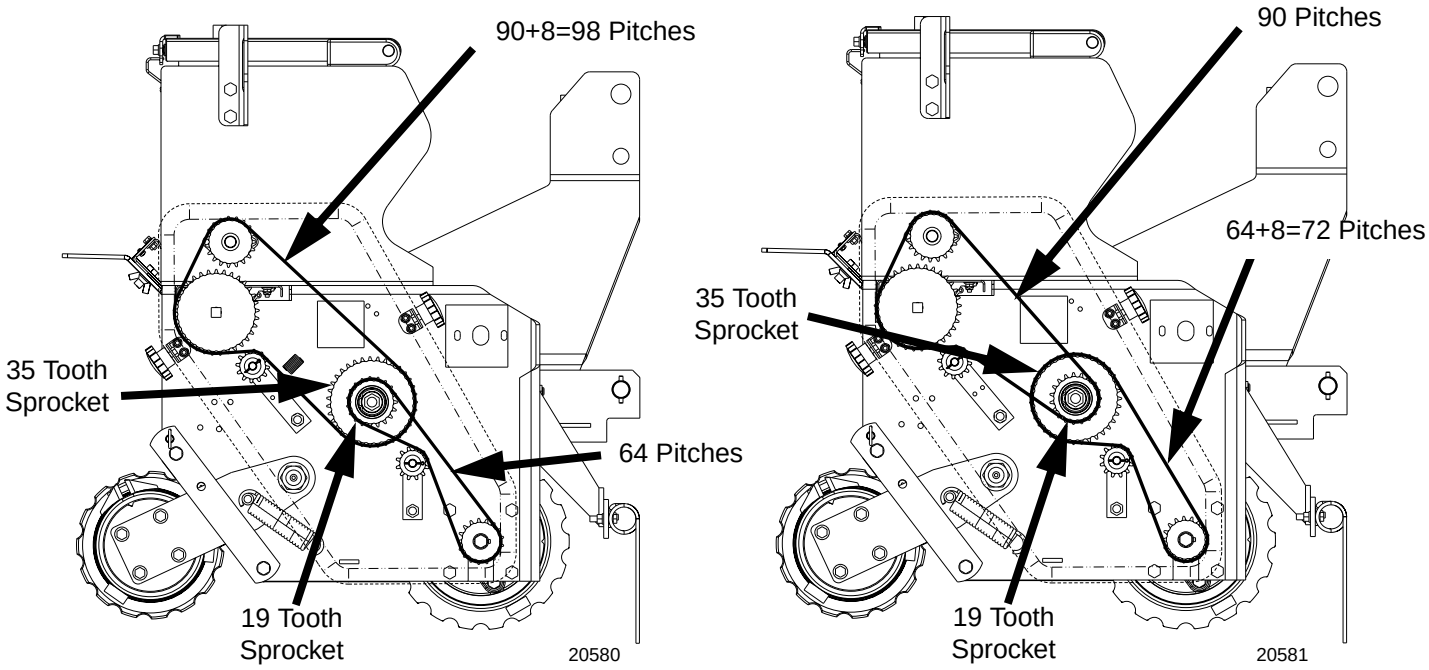
The front and rear roller packing wheels should turn freely. In field position, the rear roller assembly should be free to float up and down to follow the terrain of your field. See Figure 2-1 on page 15.

Seed Rate Speed Change

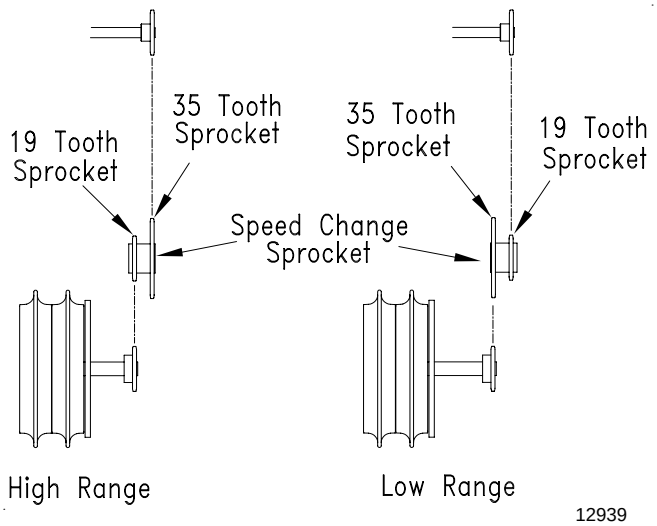
Main Seed Box

The seed rate speed change is designed to give you two speeds for different types of seeds and rates. The two drive types are high range (gives you the most pounds per acre) and low range (least pounds of seed per acre). To change the drive type and chain pitch from High Range to Low Range, 8 pitches will need to be removed from chain, refer to Figure 3-1. Remove 5/8" nut, 5/8" lock washer and 5/8" flat washer. Flip speed change sprocket for desired drive type.

See Figure 3-2 for sprocket alignment.



Speed Change & Chain Pitches
Figure 3-1



Sprocket Alignment
Figure 3-2

Seeding Adjustments

Main Seed Box

1. Using the seed rate charts, beginning on page 20, determine the seeding rate for the seed you will be planting and make the following adjustments.
   a. Decide whether you need the high range or low range drive type. Change the speed change sprocket if necessary, to the desired drive type, see
   Figure 3-1 & Figure 3-2 on page 17.
   b. Locate the seed rate adjustment handle at the rear of the seeder and move it to the indicator number obtained from the charts, see Figure 3-3. For best results, first move adjustment handle all the way to the left. Then move the handle to the desired setting, moving from a lower to a higher number.
2. There are many factors which will affect seeding rates: seed treatment, weight of seed, surface condition of seed or roller slippage. Minor adjustments may be needed to compensate for these factors.
3. The seed rate charts are based on average size seed. This may differ from the seed you are using. Use the seed rate charts as a guide. For lighter than average seed, the setting should be increased. For heavier than average seed, the setting should be decreased.
4. Complete the following procedure to calibrate the rate for your specific seed.
   a. Place several pounds of seed over three of the seed cups at the outboard end of the seeder.
   b. Raise the seeder off the ground and support safely, leaving front roller to rotate freely.

      Rotate the front roller to see that the drive system is working properly and the seed cups are free from foreign matter.

NOTE: A 1/2" bolt is threaded into the right hand end of the front roller shaft. Turn the bolt clockwise for proper seed cup rotation.

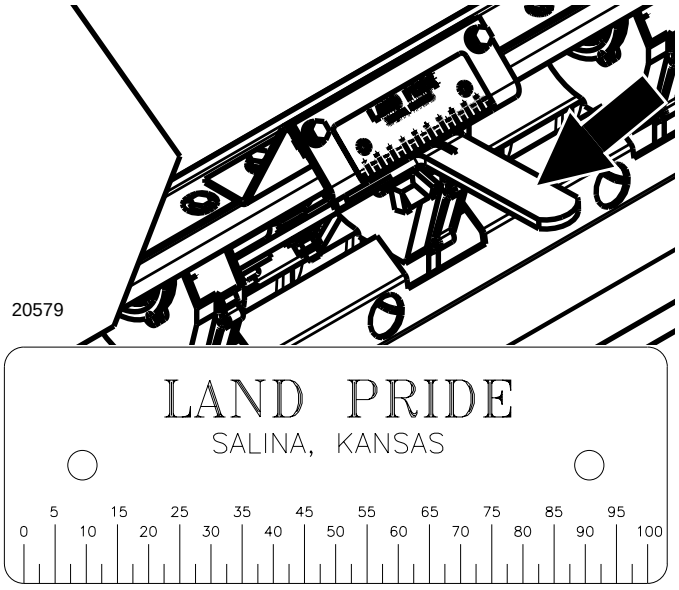
   c. Place a drop cloth under the seeder to gather the seed as it is metered.
   d. Rotate the front roller 38 rotations to get 1000 square feet or 1,640 rotations to get one acre. Be sure to check the three seed cups to make sure each cup has plenty of seed coming into it.
   e. Weigh the seed which has been metered. Divide by three. This will give you the ounces/pounds metered by each seed cup. Convert to pounds and multiply by the number of cups on your seeder to arrive at the total pounds per 1000 square feet your seeder would meter at that setting. If this figure is different than desired, set your seed cup adjustment lever accordingly.
5. You may want to repeat the calibration procedure if the results of your calibration vary greatly from the suggested settings on the chart.

NOTE: To determine seed rates for seeds not listed on the charts, compare weight and size to those listed and use a similar setting. Follow steps 4 and 5 to calibrate the seed rate.

REMEMBER: Field conditions will affect seeding rates. When seeding check the amount of seed you are using by noting acres or square feet seeded, amount of seed added to seeder, and level of seed in the seed box. If you suspect that you are seeding more or less seed than desired, and you have accurately calibrated the seeder to your seed, you may need to adjust the seeding rate slightly to compensate for field conditions.

NOTE: This seeder is equipped with a four-position door on each seed cup. The highest handle position is for small seeds, the second and third positions are for larger seeds. For application with this seeder, you will only need to use the highest position. MAKE SURE all handles are in the same position before seeding. The wide open position will allow complete clean out of the seed cup.

IMPORTANT: DO NOT open the cup to the wide open position with seed in the box unless complete clean out is desired.



Seed Rate Adjustment Handle
Figure 3-3

Small Seeds Box Option

1. Using the seed rate charts, beginning on page 24, determine the seeding rate for the seed you will be planting and make the following adjustments.
   a. Locate the seed rate adjustment handle at the rear of the seeder and move it to the indicator number obtained from the charts, see Figure 3-4. For best results, first move adjustment handle all the way to the left. Then move the handle to the desired setting, moving from a lower to a higher number.
2. There are many factors which will affect seeding rates: seed treatment, weight of seed, surface condition of seed or roller slippage. Minor adjustments may be needed to compensate for these factors.
3. The seed rate charts are based on average size seed. This may differ from the seed you are using. Use the seed rate charts as a guide. For lighter than average seed, the setting should be increased. For heavier than average seed, the setting should be decreased.
4. Complete the following procedure to calibrate the rate for your specific seed.
   a. Place several pounds of seed over three of the seed cups at the outboard end of the seeder.
   b. Raise the seeder off the ground and support safely, leaving front roller to rotate freely.

      Rotate the front roller to see that the drive system is working properly and the seed cups are free from foreign matter.

NOTE: A 1/2” bolt is threaded into the right hand end of the front roller shaft. Turn the bolt clockwise for proper seed cup rotation.

   c. Place a drop cloth under the seeder to gather the seed as it is metered.
   d. Rotate the front roller 38 rotations to get 1000 square feet or 1,640 rotations to get one acre. Be sure to check the three seed cups to make sure each cup has plenty of seed coming into it.
   e. Weigh the seed which has been metered. Divide by three. This will give you the ounces/pounds metered by each seed cup. Convert to pounds and multiply by the number of cups on your seeder to arrive at the total pounds per 1000 square feet your seeder would meter at that setting. If this figure is different than desired, set your seed cup adjustment lever accordingly.
5. You may want to repeat the calibration procedure if the results of your calibration vary greatly from the suggested settings on the chart.

NOTE: To determine seed rates for seeds not listed on the charts, compare weight and size to those listed and use a similar setting. Follow steps 4 and 5 to calibrate the seed rate.

REMEMBER: Field conditions will affect seeding rates. When seeding check the amount of seed you are using by noting acres or square feet seeded, amount of seed added to seeder, and level of seed in the seed box. If you suspect that you are seeding more or less seed than desired, and you have accurately calibrated the seeder to your seed, you may need to adjust the seeding rate slightly to compensate for field conditions.

Maintenance

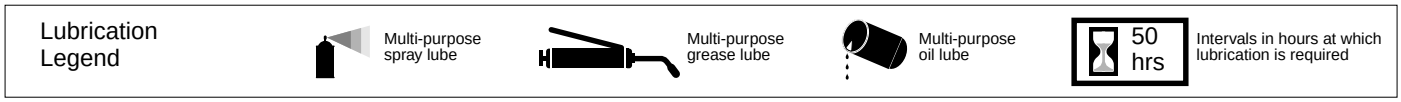
Proper servicing and adjustment is the key to the long life of any implement. With careful and systematic inspection, you can avoid costly maintenance, time and repair.

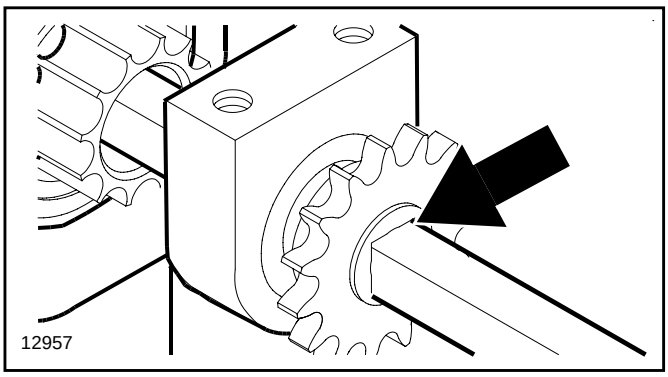
6. After using your seeder for several hours, check all bolts to be sure they are tight.
7. After transporting your seeder for several hours, check all bolts and nuts to be sure they are tight.

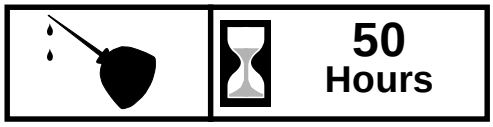
Storage

1. At the end of the working season or when your Primary Seeder will not be used for a long period, it is good practice to clean off any dirt or grease that may have accumulated on the seeder and any of the moving parts.
2. Be sure that the seed box is completely cleaned before storing.
3. The square bore of the seed cup drive sprocket hub should be oiled to prevent seizing. Squirt oil on to the square seed cup shaft and move seed cup adjustment lever back and forth in order to get the oil back into the square.
4. Lubricate all fittings as indicated.
5. When in storage, lower the seeder with rollers on a board or hard surface.
6. Repaint parts where paint is worn or scratched to prevent rust.
7. Replace all damaged or missing decals.
8. Store the seeder inside if possible. Inside storage will reduce maintenance and make for a longer seeder life.
9. Inspect the Primary Seeder for loose, damaged or worn parts and adjust or replace if needed.

Lubrication







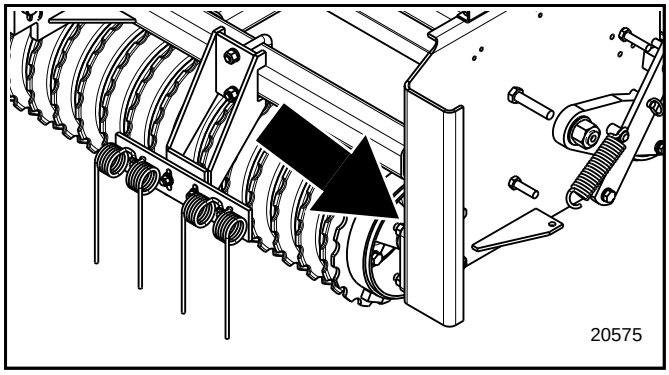
Feed Cup Drive Shaft

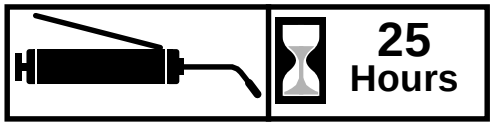
(Main box)

Type of Lubrication: Oil

Quantity = Coat sprocket bore thoroughly; move seed-rate handle back and forth to get oil into sprocket bore.

IMPORTANT: DO NOT use petroleum lubricant on the plastic seed cups. Petroleum will absorb into the plastic and swell the plastic components.

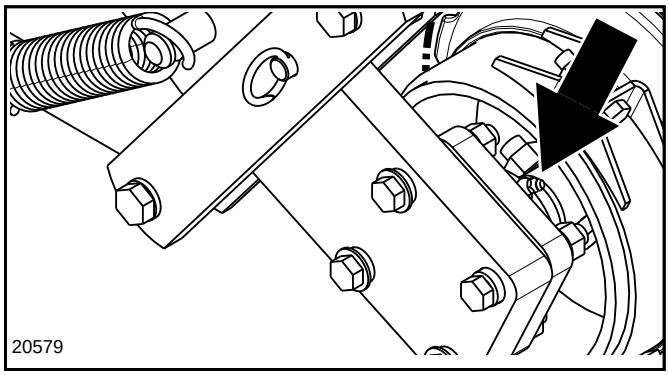


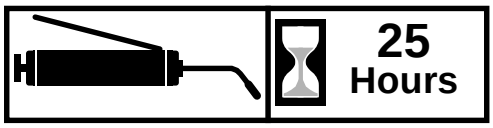


Roller Bearings

Type of Lubrication: Multi-Purpose

Quantity = Coat Generously

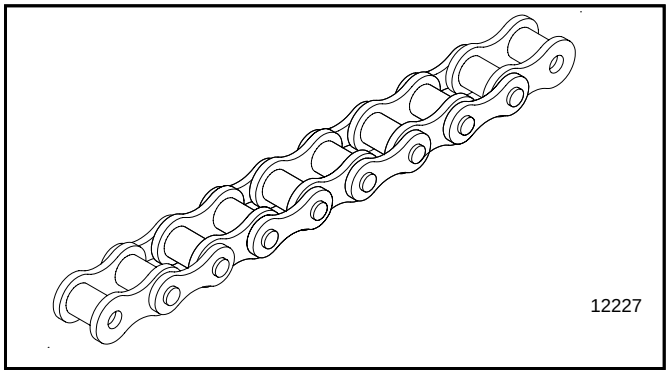




Roller Bearings

Type of Lubrication: Multi-Purpose

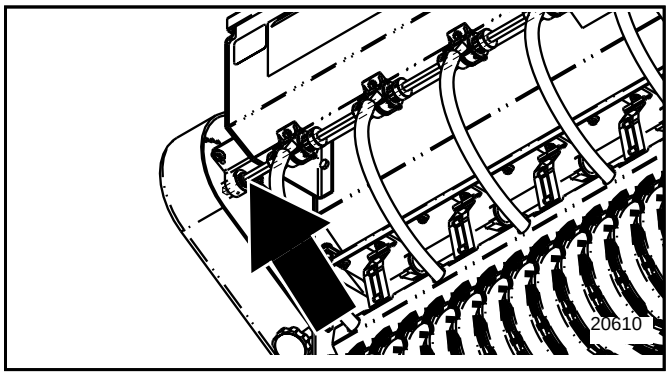
Quantity = Coat Generously

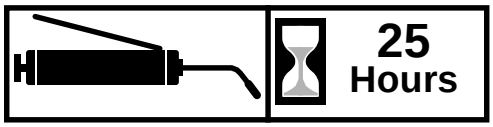


Roller Chains

Type of Lubrication: Chain Lubricant

Quantity = Generously





Drive Sprocket Hanger Bearing (Zerk)

(Small Seeds Option)

Type of Lubrication: Multi-Purpose

Quantity = Generously

PS20 Series Primary Seeder	
Model PS2096 Primary Seeder	
Overall Width	9’-4”
Seeding Width (Broadcast)	8’-6”
Weight (Approximate Pounds)	1810 lbs.
Main box construction	Continuous welded construction
Lid construction	Heavy duty precision fit with seed splash guard
Seed Capacity	1 Bushel/Foot (total capacity: 8 bushels)
Seed Cup Drive	Chain Driven from right side of front roller
Seed Cup Agitation	Chain driven paddle type agitators above main box seed cups
Seed Settings	Wide range of calibration
Seed Drop	Wind guarded
Track Removers	Double torsion spring height adjustable and replaceable, Two each
Packer Wheels- Front	12” OD notched, cast iron, 42 each with 1 1/2” sealed greaseable bearings
Packer Wheels- Rear	9 1/2” OD notched, cast iron, 43 each with free floating mounting tube and 1” greaseable bearing mounted on pivoting spring loaded arms
Hitch	Category 2 & 3; Quick Hitch Adaptable, Optional Pull type hitch (see below)
Small Seed Box	Optional small seeds box with 2 bushel capacity may be added to the PS2096

PS 2096 Pull Type Hitch	
Wheel Base	69” Center to Center
Length	95”
Hook-Up	Quick Attach Type Hook-Up
Tires - 2 ea.	9.5” L X 15” 12 Ply Tires
Cylinders	4” X 14” with Transport Lock valve
Tongue Jack	Standard
Weight (Approximate Pounds)	720 lbs.

PS20 Series Primary Seeder

Features	Benefits
Cat. 2 & 3, Quick-Hitch adaptable	Cat. 2 & 3 offers a wide variety of tractors, QH allows for easy connecting and disconnecting.
Optional pull type hitch	Allows for easier hook-up to tractor, adaptable to smaller tractors. No negative tongue weight.
Seeding width	8’ 6” Seeding width is just right for small acreage, roadside native grass work, and small turf farms.
Grass seed model	Turf grass users can use the main box for planting turf type grass seed.
Lift hooks	Lift hooks on each side of the seedbox to attach chain or strap to for easy loading and unloading.
Grass seed main box	1 bushel per foot (8 1/2 bushel) capacity keeps filling to a minimum, increases productivity.
Seedbox construction	Continuous welded seedbox construction prevents twisting from uneven ground, offers years of service.
Heavy-duty water tight lids with stay open support	Lids are precision fit to keep seeds dry and rodents out and they won’t buckle or slam shut in high winds.
Seed splash guard	Seedbox lid has a guard to prevent seed from being spilled between lid and box.
Grass seed cups	Grass seed model uses proven fluted seed cups for accurate seed rates.
Grass seed agitator	Paddle style agitator is used in grass seed main box.
Powdered metal in fluted sprockets	Helps dissipate heat from the fluted area and plastic seed cup housing.
Wind guarded seed drop	Protects the seed from being blown away by windy conditions. Constant placement of seed across the whole width of the machine.
Seed rate adjustment	Easy adjustment on seed rates. Lever position is located on seed rate chart.
Seed rate decal	Positioned on lid. Easy access to seed rate information.
High/Low seed settings	Easy adjustment on sprocket arrangement on seed cup drive. This allows for a very broad range of seed settings.
Small seeds box	A bolt-on small seeds box can be added to plant small seeds in with other types, allowing them to be seeded at rates that complement each other.
Ground driven metering	Packer wheels are in constant contact with the ground to ensure consistent metering of seed.
Cast iron packer wheels	12” diameter front rings and 9 1/2” diameter rear rings are used to crush the clods and pack the seed in to promote seed to soil contact.
Spring mounted rear packers	Rear packer wheels are spring loaded for additional down pressure, and to stay in contact with the ground.
Adjustable track removers	Spring tine track removers effectively scratch out the tracks from the tractor tires.
#40 Roller chain	All drives utilize #40 roller chain for smooth running.

Problem	Solution
Uneven seed spacing or uneven stand.	Check for plugging in seed cup.
	Reduce ground speed.
	Check for trash or mud build up on rollers.
Actual seeding rate is different than desired.	Seed treatment will affect seeding rate if the chemicals build up in seed cup. Unless cleaned regularly, this build up can cause breakage of the seed cup shaft.
Feed cup sprocket locked up or twisted feed cup drive shaft.	Check for foreign matter lodged in seed cup sprocket.
Rollers not turning freely.	Check for trash or mud build-up on roller end.

[1] in-tpi = nominal thread diameter in inches-threads per inch

[2] N· m = newton-meters

[3] ft-lb= foot pounds

[4] mm x pitch = nominal thread diameter in millimeters x thread pitch

Torque tolerance + 0%, -15% of torquing values. Unless otherwise specified use torque values listed above.

Warranty

Land Pride warrants to the original purchaser that this Land Pride product will be free from defects in material and workmanship beginning on the date of purchase by the end user according to the following schedule when used as intended and under normal service and conditions for personal use.

Overall Unit: One year Parts and Labor

Packer Wheels: Considered wear items

Optional Pull Tongue: One year Parts and Labor

This Warranty is limited to the replacement of any defective part by Land Pride and the installation by the dealer of any such replacement part, and does not cover common wear items. Land Pride reserves the right to inspect any equipment or parts which are claimed to have been defective in material or workmanship.

This Warranty does not apply to any part or product which in Land Pride's judgment shall have been misused or damaged by accident or lack of normal maintenance or care, or which has been repaired or altered in a way which adversely affects its performance or reliability, or which has been used for a purpose for which the product is not designed. Misuse also specifically includes failure to properly maintain oil levels, grease points, and driveline shafts.

Claims under this Warranty should be made to the dealer which originally sold the product and all warranty adjustments must be made through an authorized Land Pride dealer. Land Pride reserves the right to make changes in materials or design of the product at any time without notice.

This Warranty shall not be interpreted to render Land Pride liable for damages of any kind, direct, consequential, or contingent to property. Furthermore, Land Pride shall not be liable for damages resulting from any cause beyond its reasonable control. This Warranty does not extend to loss of crops, any expense or loss for labor, supplies, rental machinery or for any other reason.

No other warranty of any kind whatsoever, express or implied, is made with respect to this sale; and all implied warranties of merchantability and fitness for a particular purpose which exceed the obligations set forth in this written warranty are hereby disclaimed and excluded from this sale.

This Warranty is not valid unless registered with Land Pride within 30 days from the date of purchase by the end user.
